

Alfa Laval service by exchange

Time-saving service giving low OPEX and full peace of mind

The process performance of your Alfa Laval S or P separator is vital to your vessel. By using Alfa Laval service experts and a genuine VDD reconditioned in Alfa Laval's workshop, you ensure that your separator retains its functionality and uptime.

What we do

An Overhaul service by Alfa Laval includes inspection service of the bowl and service of the driveline. When doing an Overhaul service of a separator, exchanging the VDD for a unit reconditioned in our workshop minimizes the service time on board and secures performance and uptime.

Specifically trained Alfa Laval service personnel perform this service on board according to a global standard. The service is offered as part of an Alfa Laval Performance Agreement.

The service can be performed in response to increased OPEX or separator system disturbances, but it can also be used as preventive maintenance to protect uptime and keep costs predictable. For fixed costs and the greatest peace of mind, it can be included in an Alfa Laval Performance Agreement.

Benefits

- Increased operational safety and separator lifetime
- Lower operating costs due to minimized unplanned maintenance
- Crew time availability for core activities
- Fewer non-wear spare parts needed
- Fixed maintenance costs
- Extended warranty and full peace of mind

Scope of service

Service by exchange is possible for Alfa Laval S and P separators and comprises the following steps:

- Preparation of VDD
- System inspection and data analysis
- Disassembly
- Equipment inspection
- Replacement of wear parts
- VDD exchange
- Assembly
- Check and adjustment
- Function check and report
